

The DUT-21 DIGITAL

The Equipment

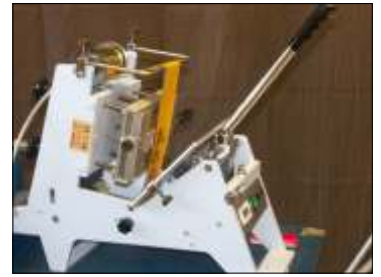

The "DUT-21 DIGITAL" hot foil printing machine is British-Made to the very highest of standards. It is a professional system for the professional user.

The DUT-21 DIGITAL is compact and takes up very little space. It can be operated sitting down or standing up, from your kitchen table, in a corner of a room, or indeed your garage. It works on normal 220/240v household power supply. (Also available in 110v as an optional extra).

The DUT-21 DIGITAL is manufactured out of solid steel with modern digital temperature controller and counter. The heat settings are accurate to within one degree centigrade, thereby avoiding irregular 'hot and cold spots'.

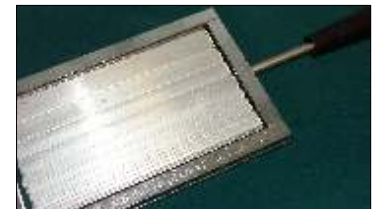

The DUT-21 DIGITAL is truly a 'plug and play' machine. Just place your Type or Block into the machine, switch on the power, feed in the coloured foil of your choice, and within minutes, your machine will have warmed up sufficiently enabling you to quietly stamp out anything from business cards to key fobs. With every machine, we even supply a free test plate so that you can practice using the machine right away!

Five heavy duty pressure screws at the rear of the DUT-21 DIGITAL ensure that you can vary the print pressure as and when required. Just turn the screws clockwise to increase pressure and anti-clockwise to release the pressure - what could be more easier?

Type Holding Chase

The Type Holding Chase comes [free of charge with the DUT-21 DIGITAL](#). All you will need to do is to purchase optional Type, Slip Cases and Quads & Spacers and you will then be able to print simple lines of text onto a wide range of products. We will be able to put you in touch with suppliers who can offer you a wide range of Typefaces at very competitive prices.

Lock-A-Block

This innovative device makes it extremely easy to hold blocks to the block holder without using any messy tapes and glues. This further avoids the problem, often associated with tapes and glues, of making the block rest unevenly onto the block holder. Uneven blocks can create uneven pressure whilst printing, thereby resulting in a lot of wastage.

The Lock-A-Block is also included [free of charge with the DUT-21 DIGITAL](#).

Pen/Pencil Holding Jig

The Pen/Pencil Jig is also supplied [free of charge with the DUT-21 DIGITAL](#). It makes it very easy to hold pens and pencils into place whilst printing. The spring loaded vice can be adjusted to accommodate pens and pencils of varying thicknesses.
