

# Optional Extras

## A4 Extension Bed + Diary Holder (£55.00+VAT)

The extension bed contained within this optional kit enables you to support an A4 sheet fully whilst printing, thus preventing the sheet flapping about or moving.

The diary / book holder on the otherhand helps to support a diary or book, fully opened. This makes it a lot easier to print onto the cover of such items.

The extension bed and the diary holder takes just seconds to attach to the multi-drilled platen (print bed) by using two thumb screws.

## Ribbon Feeder (£195.00+VAT)

This optional attachment allows you to feed un-printed ribbon from the left hand side spool to the right hand side spool (printed side). Ribbon is advanced by simply turning the manual dial located on the right hand side of the attachment.

The right hand advance mechanism is fitted with a one way clutch system thereby helping to keep ribbon taught whilst printing.

Once again, the ribbon feeder can be attached to multi-drilled platen within seconds by using just two screws.

## Auto Card Feeder (£490.00+VAT)

The Auto Card Feeder is attached to the multi-drilled platen via thumb screws and tension cable and pulleys. It takes around 5 to 10 minutes to correctly set and align the auto card feeder.

A quantity of cards (paper or plastic) can be stacked up in the hopper, and as the hands pulled for each print, the next card is automatically correctly placed in the print position.

The auto card feeder works on the assumption that the cards are not defective, warped or have any burred edges. Any of these could result in the cards jamming in the mechanism. This is not a fault of the auto card feeder but on the quality of the cards being used.
