

The "Welon Press"

... a low cost solution to Hot Foil Stamping

Optional automated foil feed system

Place items to be printed here

The Welon Press is a compact table-top light duty hot foil press. It can be used to print onto many different materials such as leather, card, paper and some plastics, making it just right for printing promotional items such as key fobs, diaries, pencils, stationery, business cards, photo graphic mounts etc.

Whilst The Welon Press has a generous sized *print bed*, the maximum *print area* is however limited roughly to the size of a business card. For the serious operator who requires a more industrial grade machine, we would strongly recommend our world famous [DUT-21 DIGITAL hot foil press](#).

The Welon Press is a small basic hand-operated hot foil press. The foil feed on this machine is not automatic. After each print, the foil has to be advanced by hand (by turning the bobbin on the left hand side). However, we do offer a optional basic automatic foil feed device which will help to speed up production a little. This device can be purchased either with the machine or indeed at a later date. The Welon Press is supplied with a die holding block as standard. An optional Type holder and Type, Quads & Spacers, Type Trays etc. are available at extra cost.

With optional type holder and type, it is possible to print up to two lines using loose Type Lettering.

The die holding block will accept any metal plate incorporating your design or logos.

Slide the type holder or die holding block into the machine and you are almost ready to print!

Now, simply feed the foil and switch the machine on. Wait for the machine to reach the correct temperature, place an object on to the print bed and pull the handle - all it takes is just a second to print!

For **£499.00+VAT**, you will get the following:-

- * Welon Hot Foil Press (British-Made)
- * 1 x Roll of 2" wide gold foil
- * 1 x Die holding block
- * 1 x Die mounting adhesive
